

Cal OES Daily Situation Report

November 23, 2016

The Foresthill Bridge is a road bridge crossing over the North Fork American River in Placer County and the Sierra Nevada foothills, in Eastern California. It is the highest bridge in California, and the fourth highest in the United States at 730 feet above the river.

WEATHER SYNOPSIS BY REGION

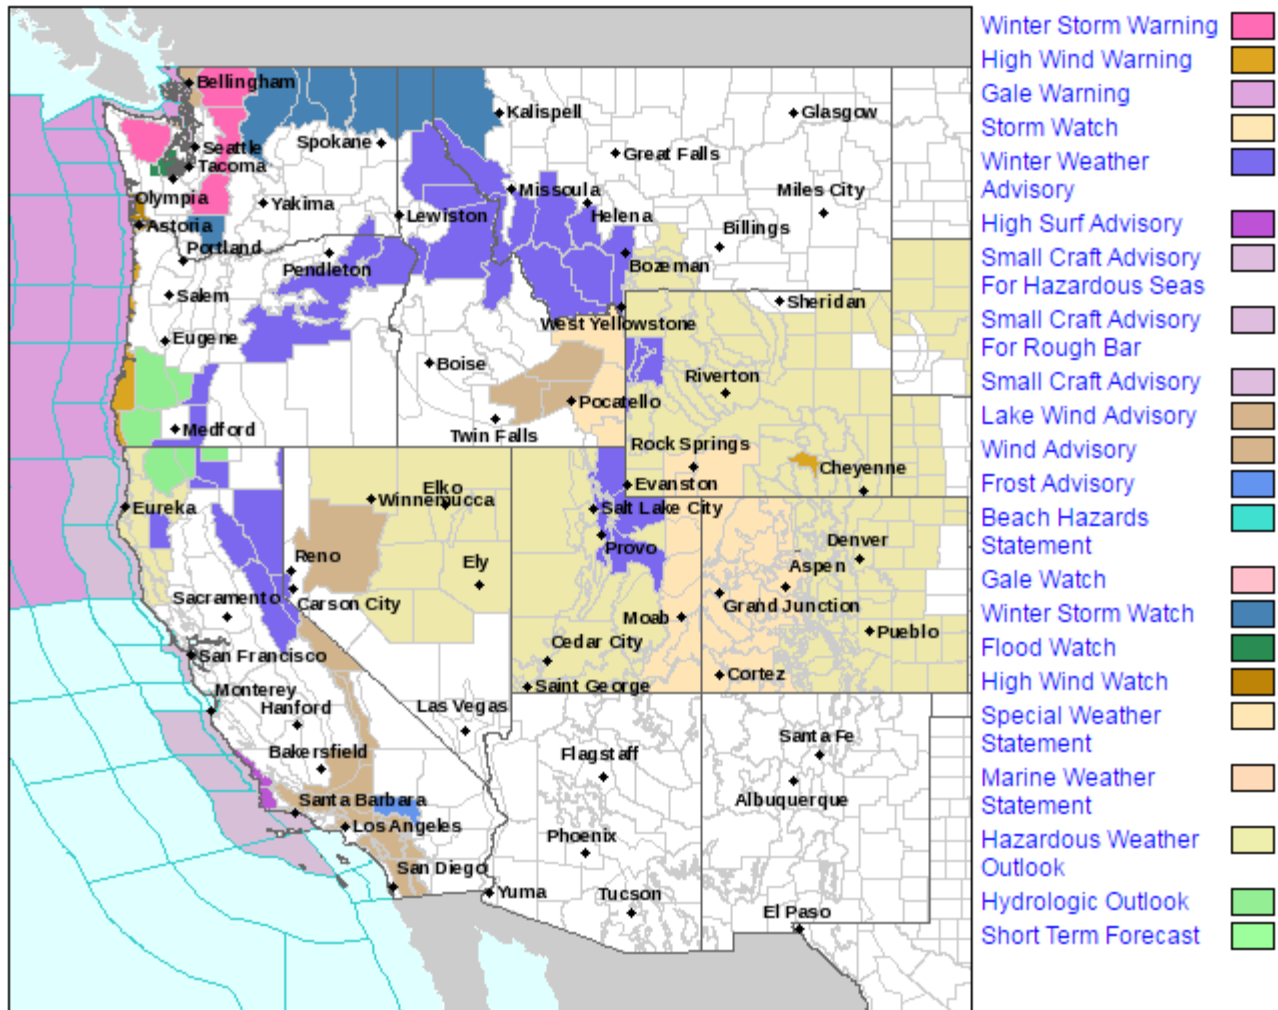

NORTHERN CALIFORNIA

A series of cold Pacific storms and cold fronts will move across the region between now and Sunday, followed by mild, breezy and drier weather on Monday and Tuesday. Another system will bring rain and mountain snow to the region on Wednesday. The system currently passing over the region will produce a few showers and isolated thunderstorms until this evening, then dissipate. Snow levels will be around 2500 feet in the north and 4000 feet in the south. Another system will reach the coast late on Thanksgiving Day, but only slowly move inland on Friday. It will finally reach eastern areas early Saturday, and another wave of precipitation will spread across the region late Saturday and early Sunday. Snow levels will generally be 5000 feet and above as each system arrives, and drop to 2500-4000 feet once each cold front passes. As each system approaches southerly winds along and ahead of the cold front will gust to 20-30 mph in open areas with peak winds in wind-prone areas reaching 35-45 mph. Temperatures will be below normal each day.

SOUTHERN CALIFORNIA

A Pacific trough moving through Northern California will bring scattered showers with less than a quarter inch of rainfall from Monterey/Fresno County line northward this morning. The snow level will be around 5,000 feet. Westerly winds of 20 to 30 mph with gusts to 50 mph will surface across the Tehachapi Mountains, Antelope Valley, and Banning Pass through this afternoon. There will be northwest to north winds of 20 to 30 mph with gusts to 50 mph from Santa Barbara County eastward into western Los Angeles County late this afternoon through tonight. Temperatures will be near to a little below normal today with 40s to low 50s across the mountains, 50s to low 60s in the valleys of Central California, and mid 60s to mid 70s in the valleys of Southern California. Minimum humidity will be 30% to 50% across Central California and 15% to 30% across Southern California and the deserts. A weak ridge of high pressure will bring a few degrees of warming to most of the region Thursday and Friday, but there will be significant warming across the coastal and valley locations of Southern California due to offshore flow. Northeast to east winds of 15 to 25 mph with gusts to 40 mph will surface across the mountains and below the canyons and passes of Southern California early Thursday morning through the afternoon. Minimum humidity will drop to the single digits and teens away from the Central Valley Thursday and Friday. A couple of Pacific troughs will bring well below normal temperatures and showers to the entire region this weekend. Most locations will receive between 0.50 and 1.50 inches of rainfall this weekend, but the Sierra and its surrounding foothills will receive 2 to 4 inches of rainfall. The snow level will be around 5,000 feet Saturday and around 4,000 feet Sunday. South to west winds of 20 to 30 mph with gusts to 50 mph will surface across the wind prone mountain and desert areas this weekend. A ridge of high pressure will bring a warming and drying trend to the region early next week.
